

GALKYNYS

PLASTIK

Galkynys plastik

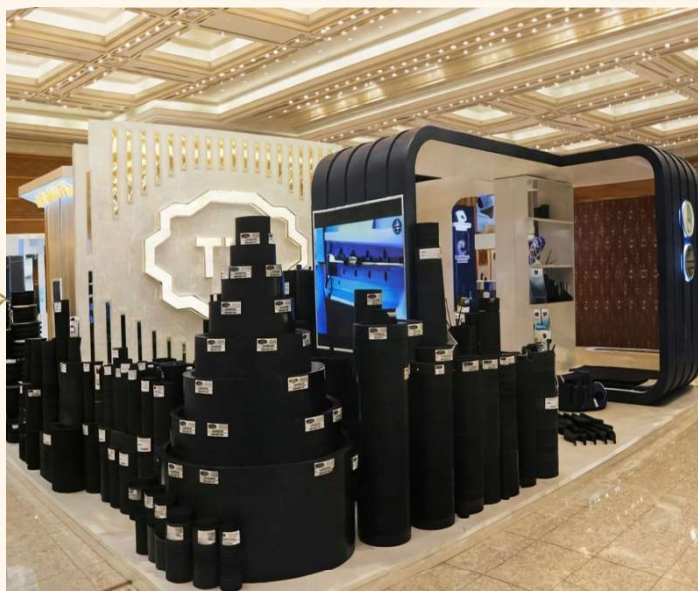

Product Catalog 2026

Galkynysh Plastik is a modern manufacturing company specializing in the production of high-quality plastic and polymer products for construction, infrastructure, agriculture, and industrial applications.

The company focuses on the manufacturing of HDPE pipes, corrugated drainage pipes, geomembranes, geogrids, drainage membranes, irrigation systems, and rubber products such as paving tiles and curbstones. All products are designed to meet contemporary technical standards, ensuring durability, reliability, and long service life in various climatic and operational conditions.

Galkynysh Plastik combines advanced production technologies, strict quality control, and carefully selected raw materials to deliver products that comply with international norms. The company pays special attention to environmental responsibility, offering solutions that are safe, efficient, and sustainable.

HDPE pipes (high-density polyethylene pipes)

Designed for use in water supply, water distribution sewage, drainage, as well as in agricultural and systems. Pipes are manufactured in diameters from Ø20 mm to Ø1400 mm.

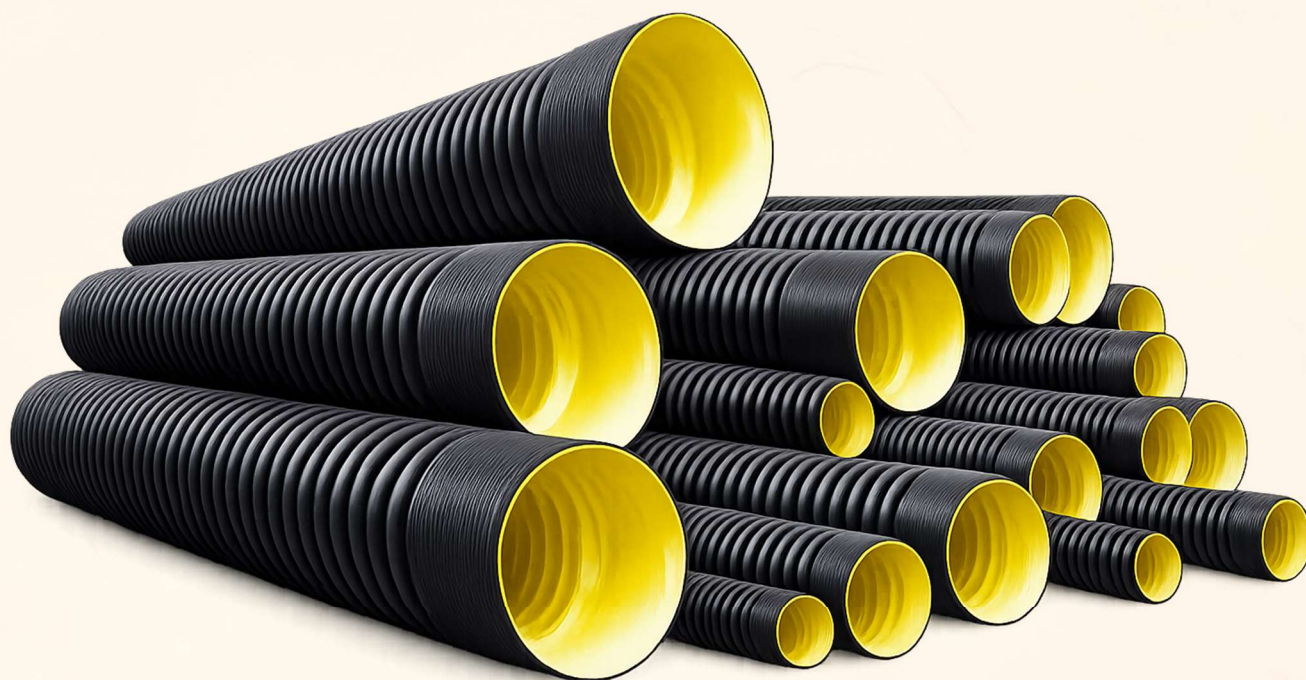

HDPE pipes are resistant to corrosion and are suitable for use in underground and aboveground environments. The smooth inner surface ensures water flow and reduces hydraulic. The pipes are connected by thermal welding and have high strength.

Products are manufactured in various SDR and pressure ratings and comply with relevant international standards.

7.	160	DN/OD 160 450 SN 8	1100 gr	Double-walled corrugate pipes
8.	200	DN/OD 200 450 SN 8	1.6 kg	Double-walled corrugate pipes

Corrugate pipes for electrical systems.

Corrugate pipes for electrical systems are used to protect electrical and communication cables. These pipes have a double-walled structure, the outer wall is corrugated, and the inner wall is smooth, which makes it easier to lay cables.

The pipes are suitable for use in underground and above-ground conditions, and are resistant to mechanical stress, moisture and environmental influences. They protect cables from external pressure, damage and weather conditions, ensuring the reliability of the system.

Corrugated pipes for electricity are widely used in residential buildings, industrial facilities, road and infrastructure projects. The products are manufactured in various diameters and meet the relevant technical requirements.

Corrugated pipes for sewage systems.

No	D, Ø (mm)	Option	Weight	Length
1.	200	ID 200-DN 230 SN8	2.2 kg	L=6.0 m.
2.	300	ID 300-DN 340 SN8	5 kg	L=6.0 m.
3.	400	ID 400-DN 460 SN8	7.8 kg	L=6.0 m.
4.	500	ID 500-DN 575 SN8	11 kg	L=6.0 m.
5.	600	ID 600-DN 695 SN8	16 kg	L=6.0 m.

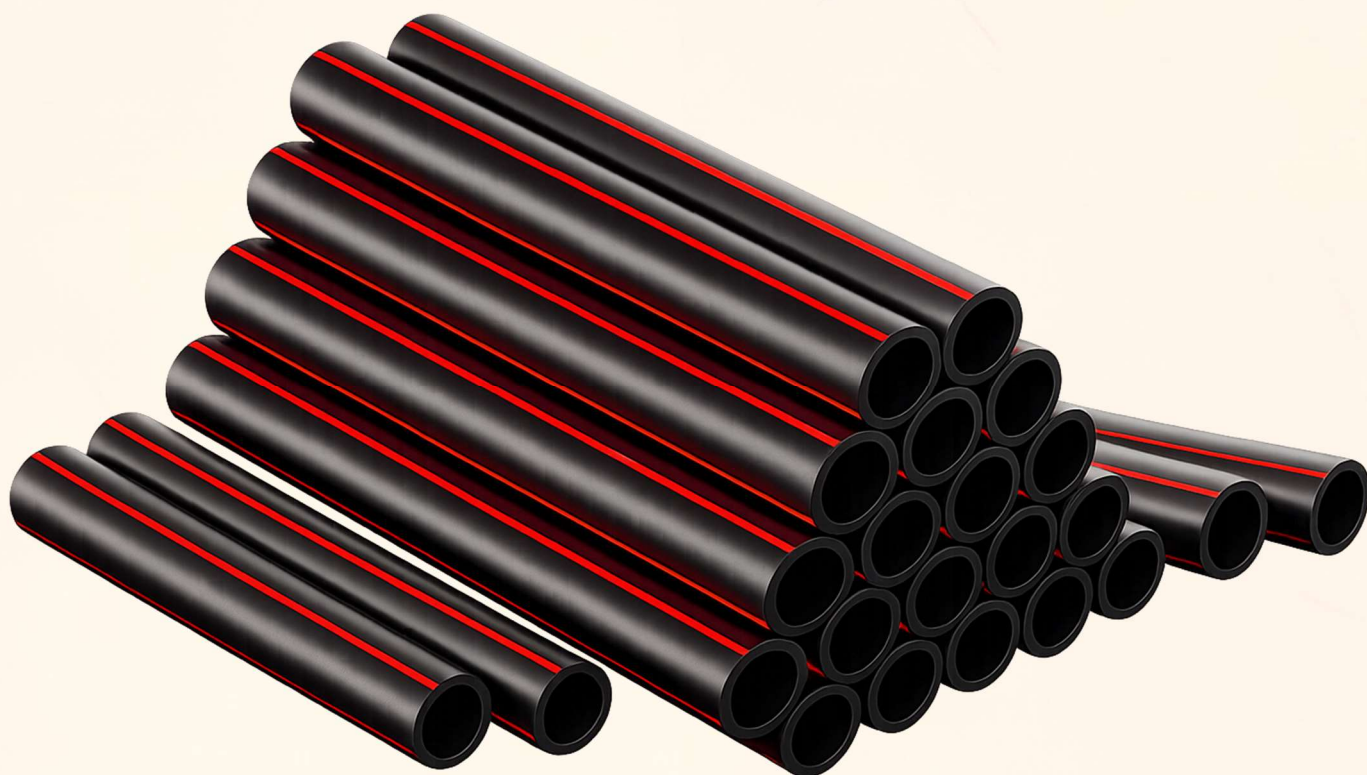

Corrugated sewer pipes.

Our pipes are made of high-quality polymer raw materials and are designed for long-term reliable service in harsh environmental conditions. Due to the double-walled structure, the outer surface of the pipes is corrugated, which provides high mechanical strength, and the inner surface is smooth, which allows the liquid to flow freely.

Corrugated sewer pipes are widely used in underground sewage systems, for rainwater drainage, industrial and commercial facilities. They are resistant to pressure, deformation, chemical influences and corrosion. The diameters and technical characteristics of the types allow you to choose them in accordance with the requirements of various projects.

The light weight of these pipes facilitates installation work, and their long service life reduces maintenance costs.

Heat-resistant polyethylene pipes.

Heat-resistant polyethylene pipes (PE-RT / special HDPE) are designed for long-term reliable operation at high temperatures. These pipes are widely used in hot water systems, heating systems and industrial water supply systems.

Heat-resistant polyethylene pipes are distinguished by their long service life, low maintenance costs and high safety, which makes them an ideal choice for modern engineering solutions.

Drainage membrane.

Membranes are produced in rolls:

- Roll width: 1,8 ; 1.96 m
- Roll length: 20 m
- Material: HDPE (high-density polyethylene)

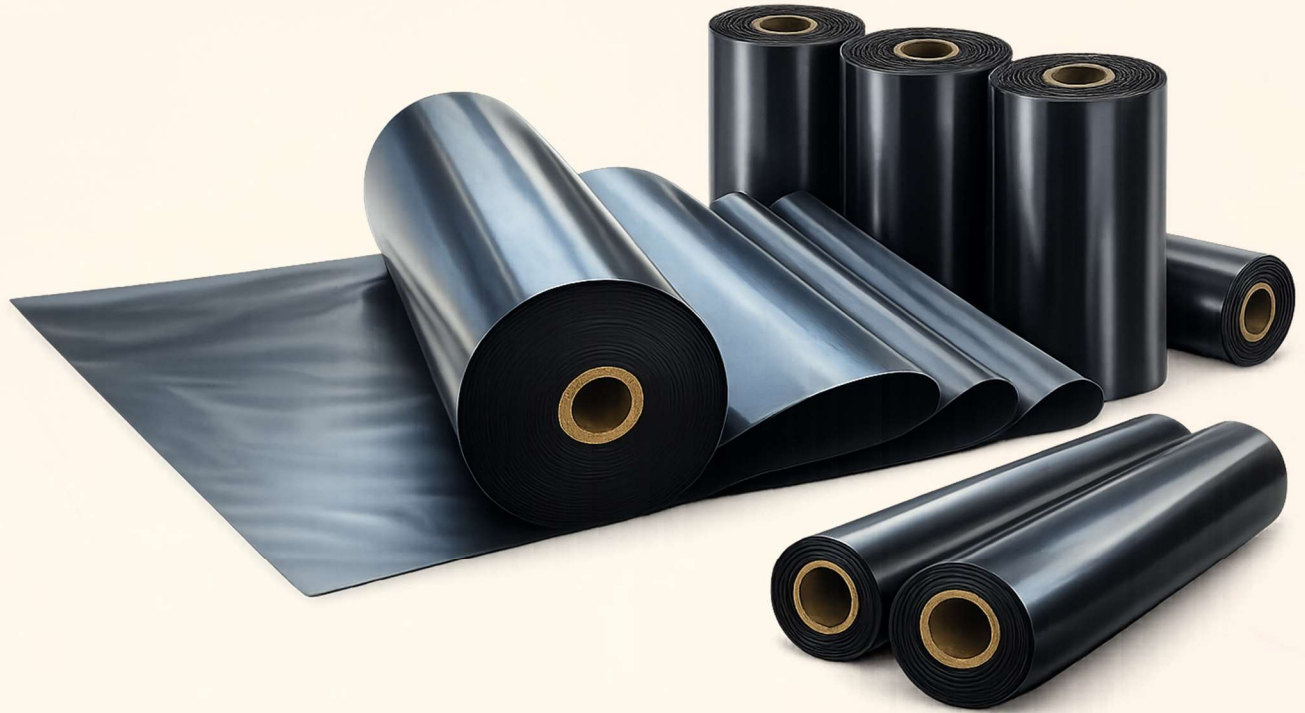

Drainage membranes are a modern waterproofing material designed to protect underground and aboveground structures in construction and engineering systems from the effects of water and moisture. The membranes are made of high-density polyethylene (HDPE).

The profiled structure on the surface of the membrane allows water to flow freely, equalizes pressure and provides long-term protection of the foundation, walls and other structural elements. The material is resistant to mechanical stress, corrosion and environmental influences.

Drainage membranes are widely used in buildings, basements, underground structures, road and infrastructure projects, as well as residential and industrial buildings. They are easy to install and provide reliable and long-term protection.

Geomembrane.

Geomembranes are a modern waterproofing material used as a waterproofing layer in construction, agriculture and industry. They are made of high-quality polymeric materials and provide reliable protection in various environmental conditions.

Geomembranes are product in rolls:

- Roll width: 6 m
- Roll length: 50 m
- Thickness options: 1,0 mm; 1,5 mm; 2,0 mm

Drip irrigation pipes.

Drip irrigation pipes are designed for economical and efficient use of water in agriculture. The diameter of the pipes is Ø16–20 mm, and water is evenly distributed directly to the root zone of the plant. The water supply through the drippers is 2–4 liters per hour, which ensures the healthy growth of these plants.

Pipes are producing in two types of thicknesses:

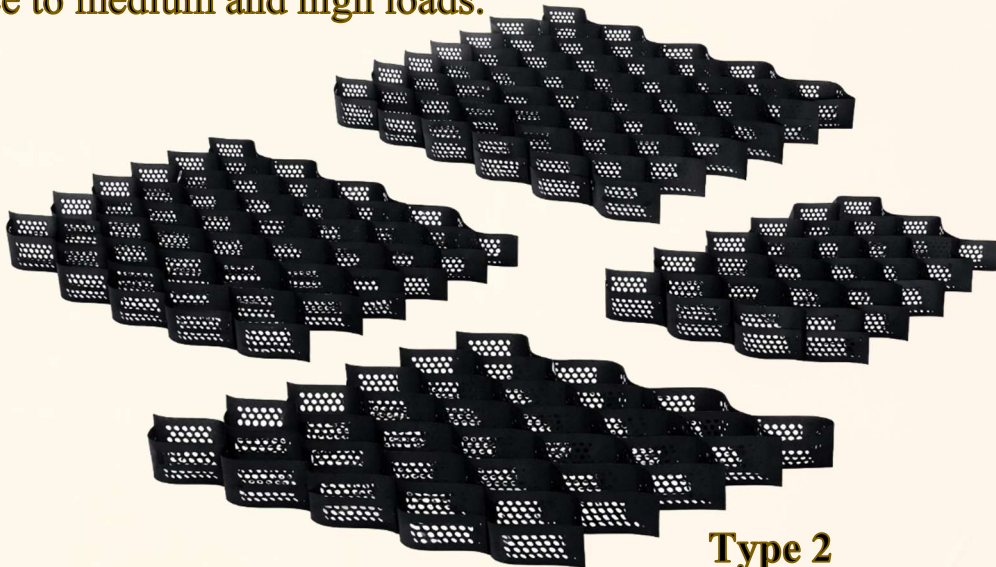

- SDR6 – thickness 0,9 mm
- SDR9 – thickness 1,0 mm

Geogrids.

Type 1

- Grid size: 210×210 mm
- Grid height: 100 / 150 / 200 mm
- Module working size: 2640×5600 mm
- Module area: $14,78 \text{ m}^2$

This type is designed to strengthen road surfaces, ground structure, and provide resistance to medium and high loads.

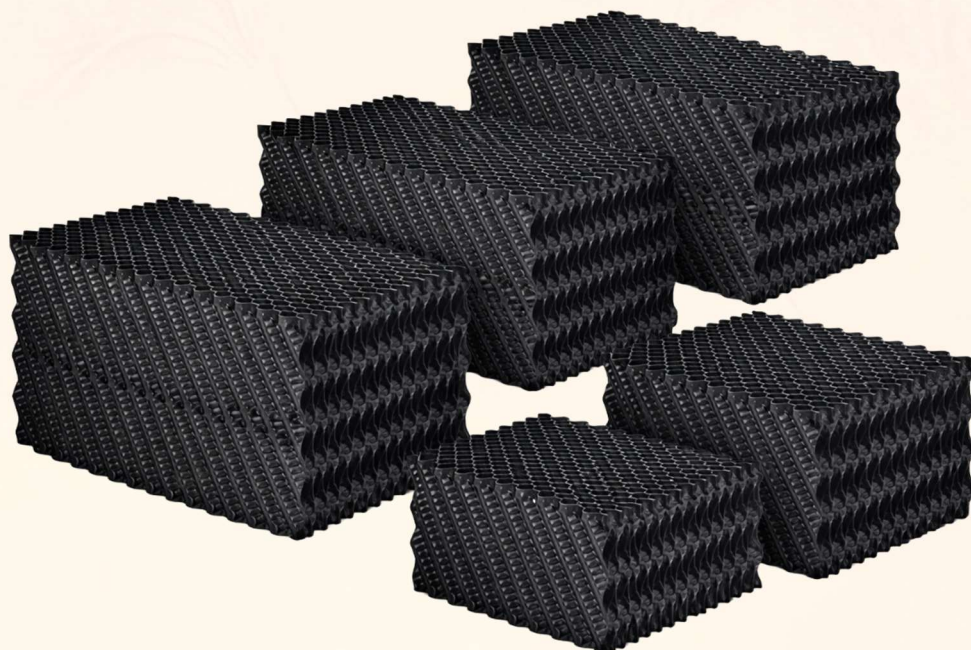

Type 2

- Grid size: 420×420 mm
- Grid height: 100 / 150 / 200 mm
- Module working size: 2520×8100 mm
- Module area: $20,41 \text{ m}^2$

This type is suitable for large areas and is distinguished by its high productivity and economic efficiency.

Water filter package.

A water distribution pack is a structural element designed for use in industrial and engineering systems to ensure efficient distribution of liquids and to enhance the heat exchange process. The product is manufactured from high-quality polymer materials, offering long service life as well as high mechanical strength and stability.

Rubber slabs and curbs.

Rubber slabs and curbs are made of high-quality rubber raw materials and are a durable and safe covering solution that is resistant to environmental influences.

These products are manufactured using modern technologies and have high mechanical strength and resistance to deformation.

Rubber slabs are designed to cover various types of surfaces: walkways, children's playgrounds, sports fields, recreation parks, parking lots and public areas. The non-slip structure of the surface ensures safety and reduces the risk of injury.
